

2020 Investor Relations

Three years ago, we set out on a journey to take what we've learned in over a century of naval shipbuilding and apply it to our government's most complex problems.

We committed to building the Technical Solutions division responsibly and with an eye toward revenue growth and ensuring a return on your investment.

Three years later, we've not only met those goals, we've built a strong foundation for future growth and value creation.

How did we get here? By growing and expanding within our core competencies.

We are positioning for expansion in key growth markets, such as nuclear and environmental reclamation services...

By leveraging our nuclear experience in the shipyard, we've gone from 1 to 6 major contracts, including managing and operating Los Alamos National Laboratory, the birthplace of atomic power.

Through our partnership with Boeing, we've taken the lead in unmanned undersea systems, on the surface and in space...

And we support the only commercially operated unmanned airborne intelligence, surveillance and reconnaissance platform, planning missions and analyzing the intelligence for our allies and partners.

Through strategic acquisitions, we are breaking new ground in next-generation C5ISR.

We are writing the nation's cyber security standards, supporting cyber operations, and developing artificial intelligence for autonomous systems.

Our scientific expertise has allowed us to gain a tremendous foothold in the rapidly growing military training and simulation market.

We are ensuring that thousands of military flight simulators accurately reflect actual flight characteristics, and that our military's pilots receive the most current training in combat tactics.

Technical Solutions keep the Navy's ships afloat – training sailors, and flying engineers and skilled craftsmen around the world to find and fix the Navy's toughest readiness problems.

Through our partnership with KBR, we are also training Australia's next generation of shipbuilders – ensuring that one of our strongest allies can stand beside us in keeping the oceans free.

We are investing in our people while maintaining a strong ethics and safety culture.

We are continuously improving execution of today's work for our existing customers.

We are integrating systems, sharing lessons-learned across our capabilities, and moving resources where they are needed most, to get the job done.

Leveraging capabilities across the HII enterprise, Technical Solutions is solving the nation's most complex problems.

We are proud to grow and shape the future of national security.
